

ANSWER BACK SYSTEM

SYSTEM DESCRIPTION

Answer back system has the following functions.

The answer back system shows location of the vehicle by turning on the turn signal lights and buzzer sound sending them the signal transmitted by pushing the ANSWER BACK button on the remote transmitter.

This system consists of the following items:

- Answer back unit
- Buzzer
- Remote transmitter
- Ignition switch

The system's sound level and pattern can be customized.

- Temporary silent mode
- Setting the sound level
- Setting the sound pattern

The system can store three remote transmitter codes.

- The effective distance of the remote transmitter is approximately 10 m (32.8 ft).
- If the vehicle is not used for ten days, the system will be automatically deactivated. To re-activate, turn the ignition switch "ON".
- The system uses very small amount of electricity. It will not cause battery discharge problem.
