

## ELECTRICAL SYSTEM

### Engine Starting Procedure in Emergency Mode:

- Check the ID number indicated on the ID tag of the Honda SMART Key registered in the vehicle.
- To input "0," do not press the ignition switch and wait until the Honda SMART Key indicator and ignition switch ring are blinking once.
- Emergency mode is released by the following condition:
  - Press the knob switch for more than 2 seconds when the ignition switch is not ON.
  - Leave for more than 6 minutes when the ignition switch is not ON.

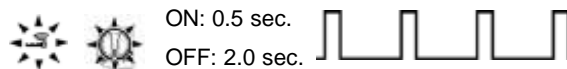

### How to input the 9-digit ID number to start the engine:

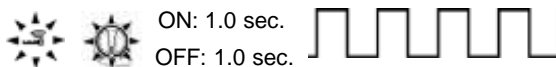

- Connect the EM connector [1] to the EM mode connector [2].
  - The Honda SMART Key indicator [3] and ignition switch ring [4] come on.

- Use the knob switch to input 9-digit ID number.
  - **[A]:**  
Press 5 times, then wait 5 sec.  
Honda SMART Key indicator and ignition switch ring blink once.
  - **[B]:**  
Do not press, then wait 5 sec.  
Honda SMART Key indicator and ignition switch ring blink once.
  - **[C to H]:**  
Repeat the above procedure.
  - **[I]:**  
Press 3 times, then wait 5 sec.  
After 9-digit ID number is input, the Honda SMART Key indicator and ignition switch ring start blinking as shown below.

Input completed:

Input failure:

- Disconnect the EM connector.
  - **Input completed:**  
The Honda SMART Key indicator and ignition switch ring come on. (Buzzer sounds twice)  
The ignition switch unlocked.  
Turn the ignition switch ON and start the engine.
  - **Input failure:**  
Try again from the beginning.
